

MOUNT EMMOT UPDATE

The Mount Emmot Cableway was installed on the new corner module. It has operated during several TECO shows.

However, the module had no other scenery, so we decided to install roads, houses, and scenery during the April 25, 2015 TECO show. Let's take a look back at the module:

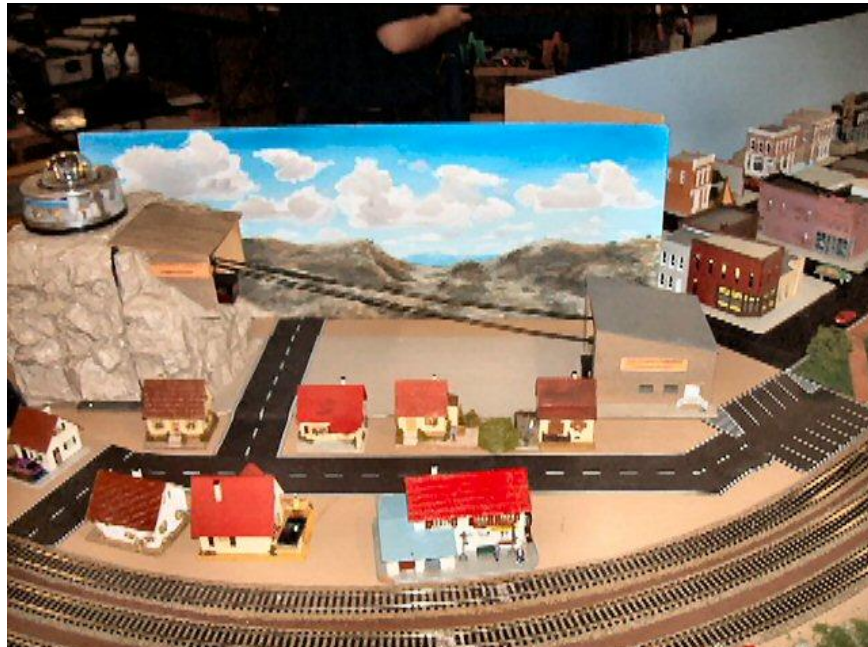

The original module appearance

The module with the cableway installed

At the TECO show, John Emmot and Jerry Hansz moved the cableway as far back as possible, to provide room for buildings. The roadway was installed, and buildings were installed.

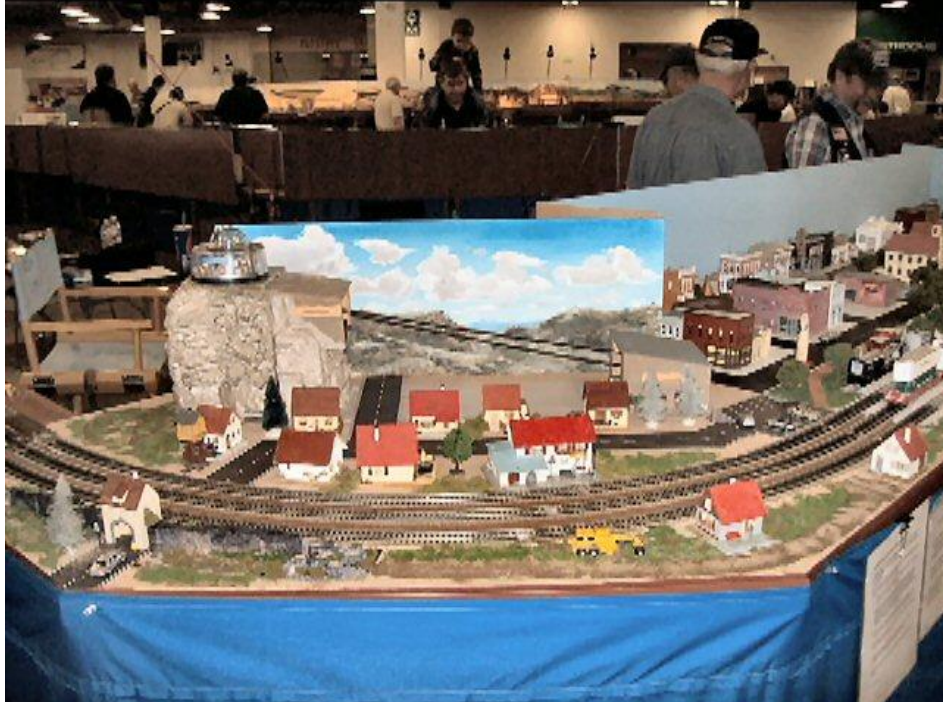

Roads and houses installed.

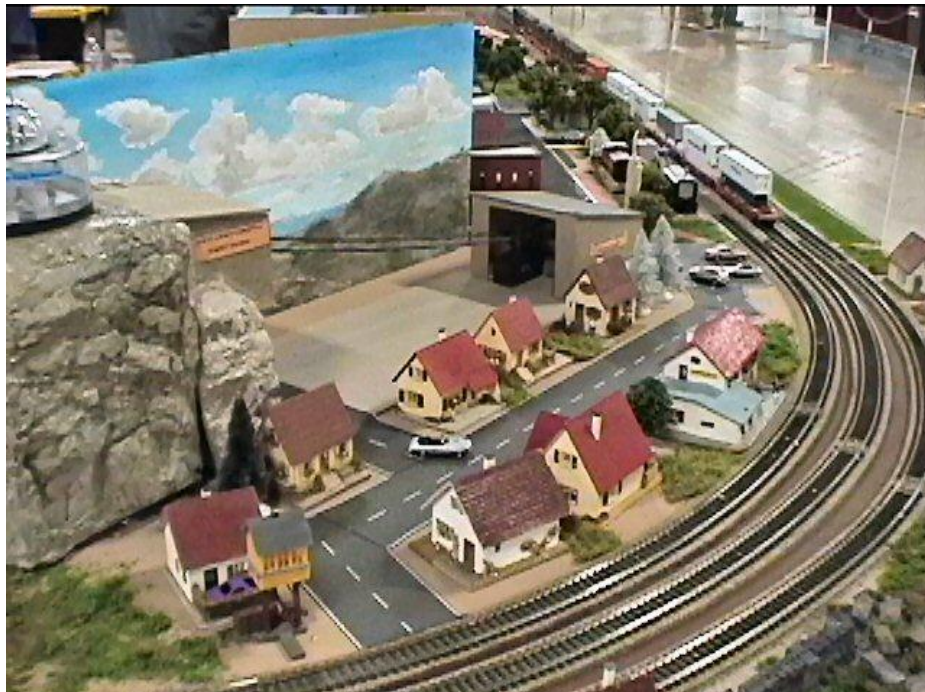

After most of the scenery was installed on the 25th, the Mount Emmot module looks like this:

View with ancient gate on left

A closer view

After more ground cover and trees are added, the module will be complete. Ballasting had to wait, since all three tracks had trains during the show.
